

Species of fishes and life-history stages with designated EFH the Rocky Shelf EFH composite in the coastal waters of Washington State. The Rocky Shelf composite is those waters, substrates, and associated biological communities living on or within ten meters (5.5 fathoms) overlying rocky areas, including reefs, pinnacles, boulders and cobble, along the continental shelf, excluding canyons, from the high tide line MHHW to the shelf break (~200 meters or 109 fathoms). (? = uncertain).
